Project Title: **Prescription and Report Delivery System**

Technology: Web programming language (PHP, HTML, CSS, JavaScript)

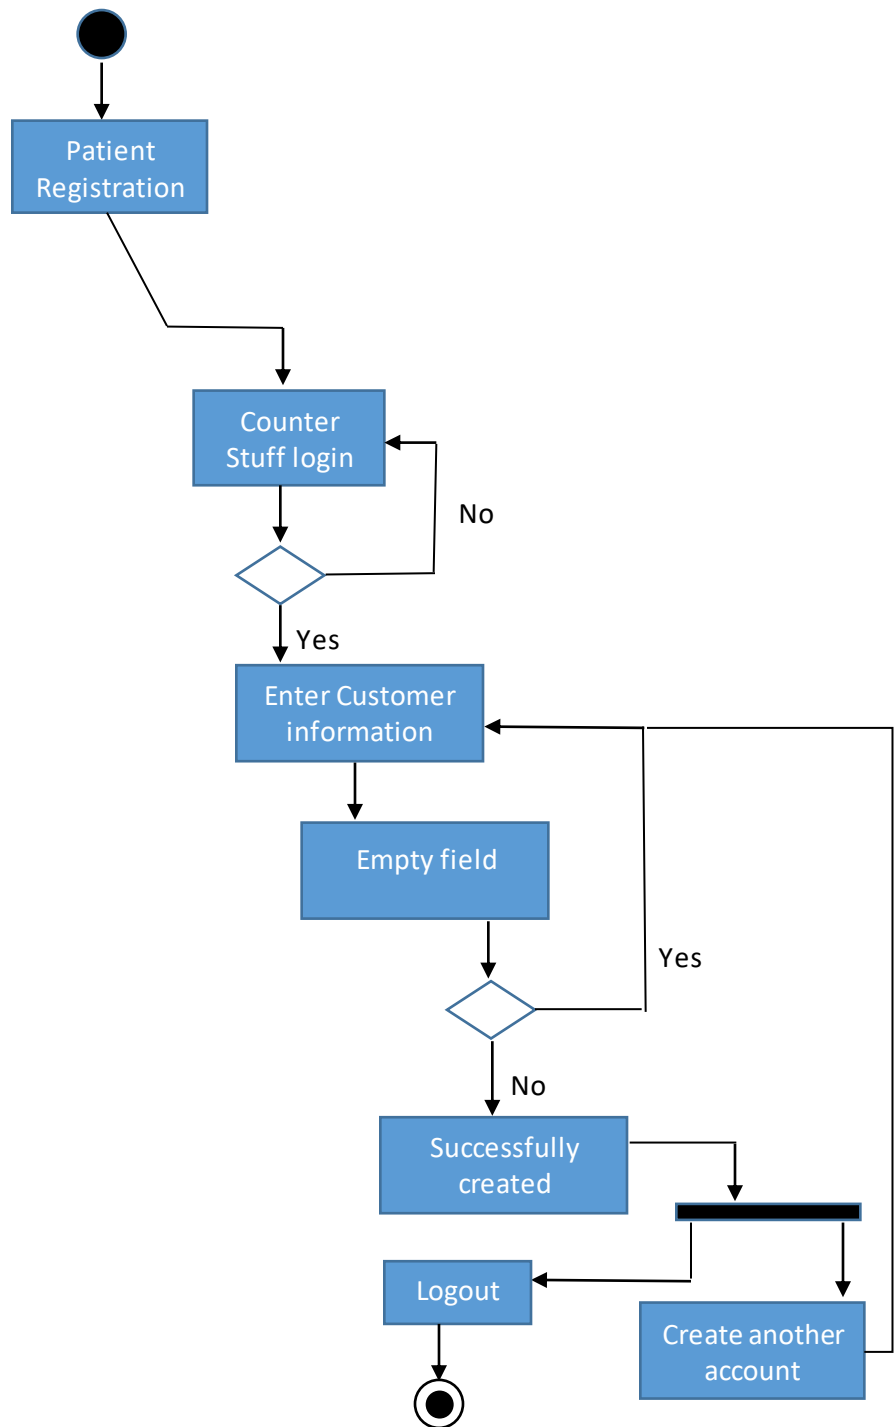

Description:

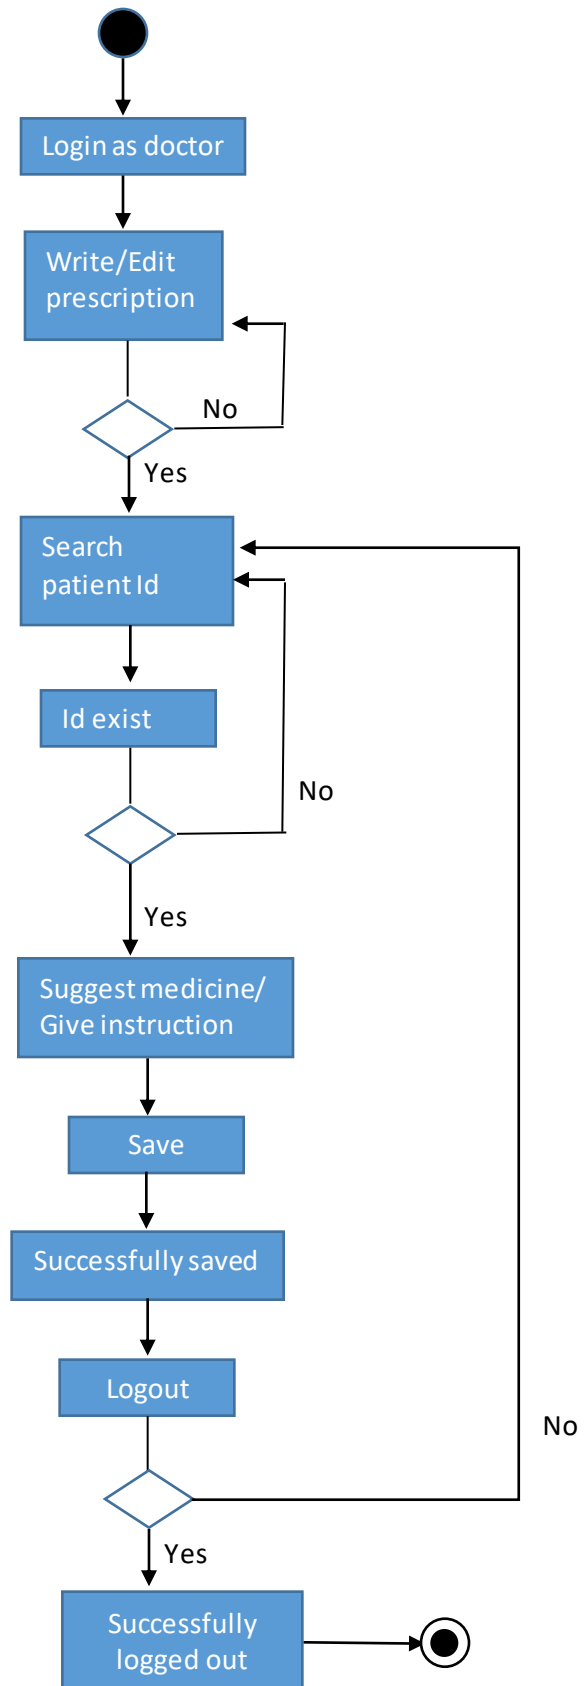

Our project name is “**Prescription and Report Delivery System**”. In this project, we are going to solve some public issues and some real-life problems which occur in Bangabandhu Sheikh Mujib Medical University (BSMMU). The problem with the prescription is, people sometimes lost their prescriptions on pharmacy, road and somewhere else. After losing their prescription, if they want to have it again then they have to collect it by queuing in a big serial. And after collecting it, they have to go to the doctor again for prescribing about their disease. So, if anyone lost their prescription its really hard to makeover it and its also waste their time. And sometimes its really difficult to understand the handwriting in prescription. When people are going to collect their reports from report delivery booth they have to wait a long time in serial to collect it. Sometimes waiting in a serial for long-time the report cannot be found in the booth(delivery person suggest to go another building). So people have to go one building to another to collect the report. So its a waste of time. And there is also a risk of losing the report. In this project, we are going to make a system in which authority can create an id for patients including their name and age and it will be used as a prescription for a patient. Patients only have to collect the id from the ticket counter. When a patient collects his id from the ticket counter and goes to the doctor's chamber, the doctor can access his prescription and can prescribe him using the system. Using this system patient can also view and print their prescription from anywhere. For using this system doctor's don't have to hand write on the prescription so it will be easy to understand the prescription(handwriting problem solved). For collecting the report(blood, urine) people don't have to queue in a long serial. if the report is ready to deliver then they can collect their report from the system by using their id from anywhere. If patients want to print their report they can print. If the report is ready to deliver then they can go to the doctor's chamber for showing their report to the doctor. Doctors also will have access to every patient's reports so its not necessary for a patient to come with the printed report.

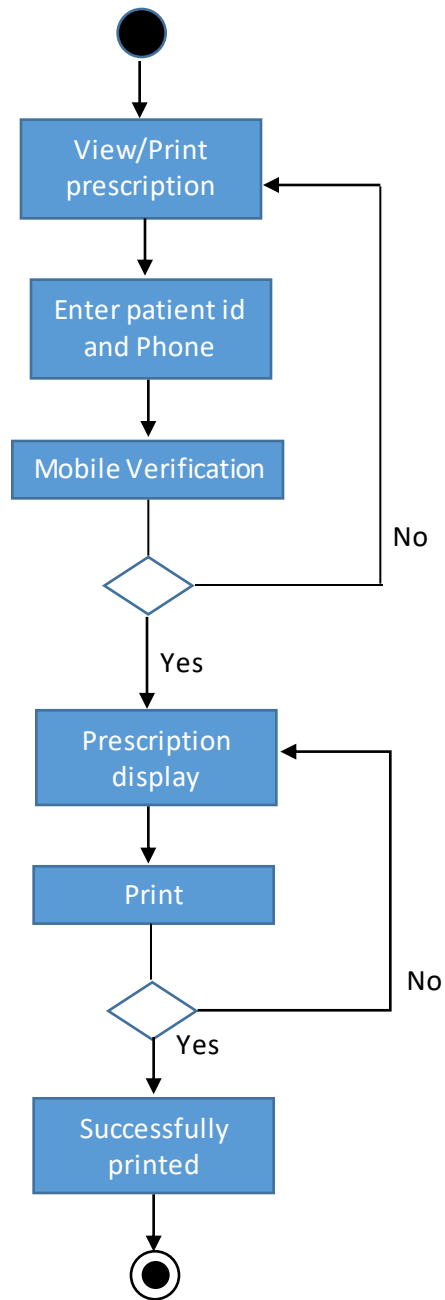

SRS:

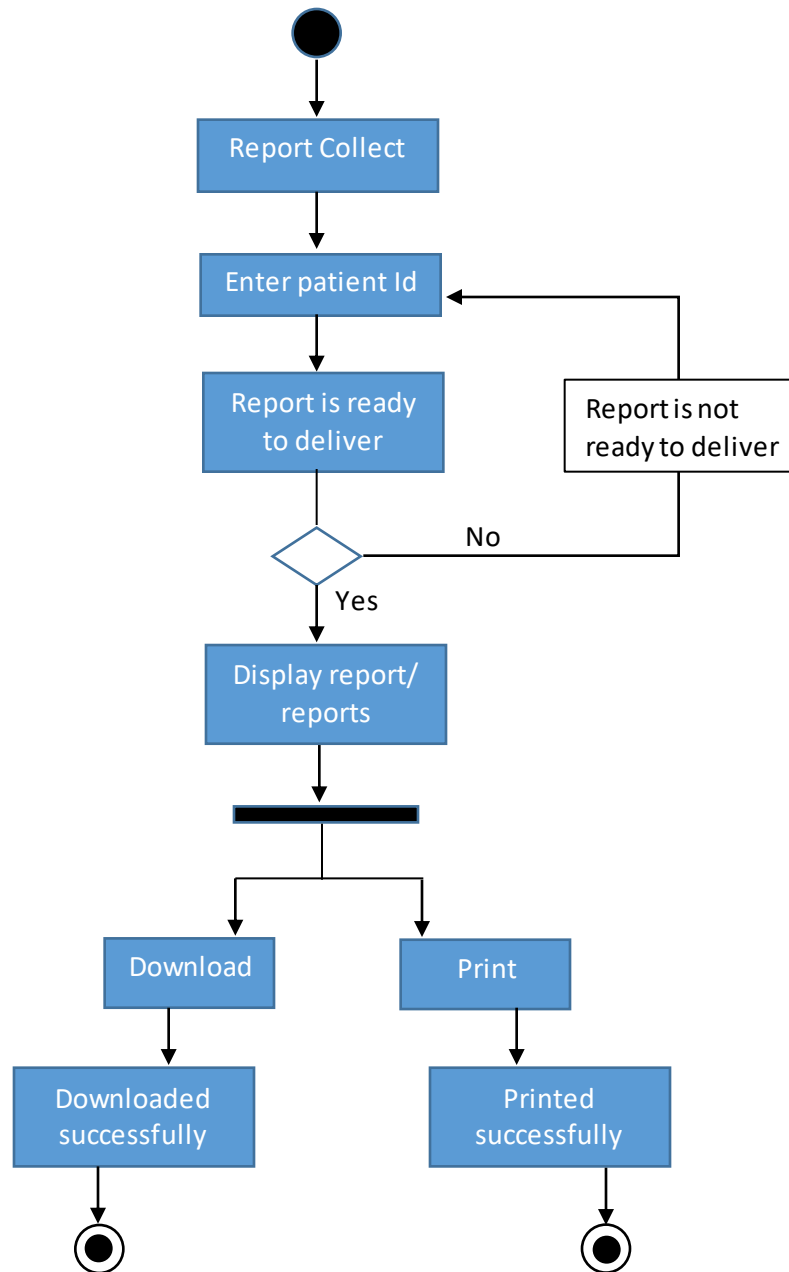

SRS ID	SRS Name	Priority	SRS Details
FR01	Registration & validation	High	For registration user must provide valid information.
FR02	Patient Account	High	Authority can create a patient account(which will be used as prescription).
FR03	Access/edit prescription	High	Doctor will access to the patients prescription by patients id and prescribe the patient.
FR04	View/print prescription	Medium	Anyone can view and print the prescription by id
FR05	Report collect	High	Patient can collect their report from anywhere if the report is ready to deliver.
FR06	Print report	Medium	Patient can print their report.
NFR07	Usability	High	How difficult the system will be for a user to use.
NFR08	Security	High	How secure the system and system's information. And only authorized person can access the system.
NFR09	Reliability	High	Reliability depends on the system failure or having bugs in the system.
NFR10	Scalability	High	Serving more users and processing more data.

Use case Diagram for Stuff

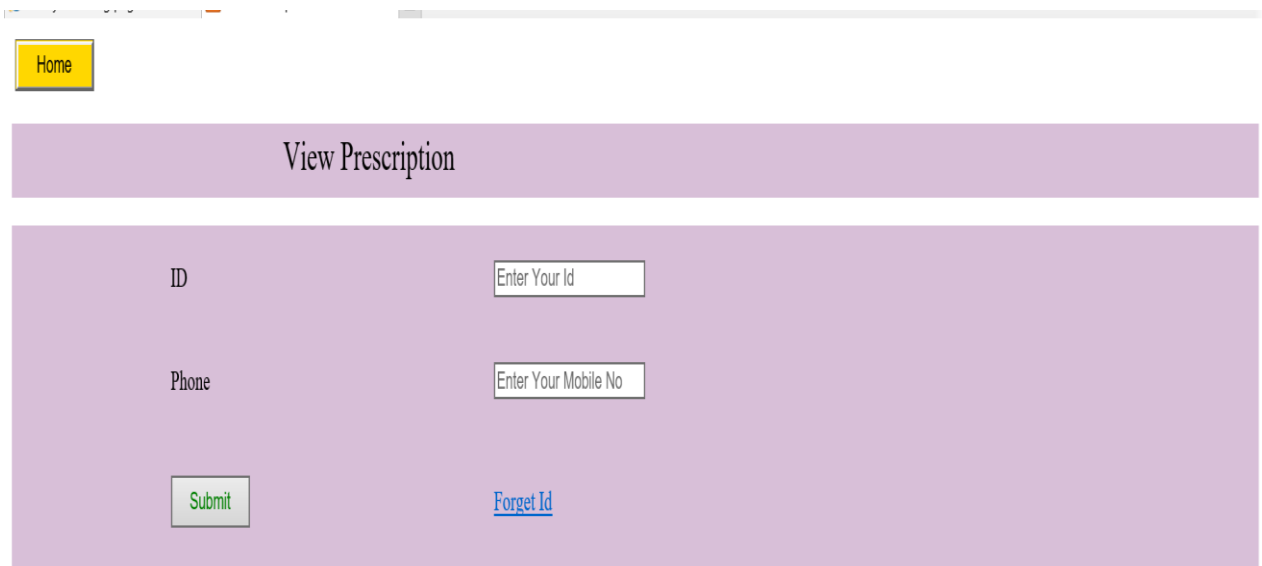

User Interface:

A screenshot of a user interface with a light blue background. It contains two buttons stacked vertically in the center: 'View Prescription' and 'Collect Report', both with red text. Below these, there is a red text note: '*This button is only for stuffs/doctors'. At the bottom center is a 'Login' button with green text.

Clicked on the button View Prescription*

A screenshot of a user interface with a light purple background. At the top left is a yellow 'Home' button. The main heading is 'View Prescription'. Below it are two input fields: 'Enter Your Id' and 'Enter Your Mobile No'. At the bottom left is a green 'Submit' button, and at the bottom right is a blue 'Forget Id' link.
